1. Methodology

Data Collection

This study was conducted via touch-tone response automated phone survey conducted 12-14 May 2022. Surveys are conducted between 17:30 - 20:20 weekdays and 10:00 - 17:30 Saturdays at the local time of respondents so as to not over-sample nonworkers and stay-at-homes.

The study was conducted among a sample of n=1,845 people aged 18 years and over from a population of 25,688,786. Telephone numbers were licensed from a commercial provider and include both landline and mobile phone numbers. In this survey 43.7% of respondents were reached via mobile phone.

Weighting

Following the completion of the surveys, the data was cell-weighted by gender and age to reflect local population proportions.

The effective sample size following weighting is 971 meaning the effective margin of error is +/-3.1%.
